

Continuing Professional Development Lecture: Can You Hear What I'm Thinking? The Role Of Audition And Language In The Development Of Theory Of Mind 22 June 2021

Synopsis

Having a matured concept of Theory of Mind (ToM) is essential in managing relationships and social communications as it allows a person to better predict and explain another person's thoughts and behaviors. Children with hearing loss, like children with Autism, have shown to have delayed (ToM) development, however, largely attributed to the lack of access to conversations around them. At the end of this talk, participants will be able to:

- Describe how "overhearing" and incidental learning play a role in ToM development.
- Describe how to facilitate ToM development through parent guidance and the use of Auditory-Verbal strategies.

Speaker

Nikita Kamdar
Senior Auditory-Verbal Therapist
ENT Centre, SGH

Nikita graduated with a Master's Degree in Speech & Hearing Sciences (Deaf Education-Early Oral Intervention) from the United States. She gained valuable experience working in a school and at the renowned Listening Center at John's Hopkins Hospital, providing therapy to adults and children with varying degrees of hearing loss.

Nikita is one of the few certified Listening & Spoken Language Therapists in Singapore and has been practicing Auditory-Verbal Therapy since 2014. Her experience and interests also include working with children with hearing loss and other developmental challenges such as Autism.

Nikita is also a firm believer in patient education and providing extended care to families of children with hearing loss through support group activities.
