POSTGRADUATE
ALLIED HEALTH INSTITUTE

The Neuropsychology of Neurological Conditions

24 & 31 July 2024

Introduction

This course will explore the basic concepts of neuropsychology as well as the nature and features of Parkinson disease, epilepsy and head trauma. These concepts include different cognitive domains, and dimensions of behaviour and function. In this course, they will be related to the neurological disorders in terms of evaluation and assessment. The different dimensions assessed include, namely, the physical, the functional, the emotional, the behavioural and the cognitive aspects. An understanding of these conditions will enable healthcare workers to apply more appropriate treatment strategies.

Course Objectives

This course aims to enable participants to:

- Understand the basics of the various dimensions in neuropsychology and the various cognitive domains
- Understand Parkinson Disease and its neuropsychological features
- Understand epilepsy and its neuropsychological features
- Understand head injury/traumatic brain injury and its neuropsychological features
