Our Services
OBSTETRICS SERVICES
- Pre-Pregnancy Counselling
- Antenatal Classes
- Prenatal Diagnosis & Counselling
  - Fetal anomaly ultrasound scan
  - Amniocentesis, chorionic villus sampling, fetal blood sampling
  - Fetal therapy
  - Down syndrome screening, nuchal translucency ultrasound scan, first trimester and second trimester serum screening
- High Risk Pregnancy Clinic
- Gestational Diabetes Mellitus Clinic
- Obstetrics Day Assessment
  - Medical disorders in pregnancy (e.g., Autoimmune disease and renal disease)
  - Fetal wellbeing assessment
  - Maternal blood pressure monitoring & treatment
- Obstetrics Ultrasound Services
  - Early pregnancy scan
  - Fetal anomaly scan
  - Growth scan, Doppler studies
  - Placental evaluation
  - Labour and delivery suites with full obstetric anaesthetic support

GYNAECOLOGY SERVICES
- General Gynaecology
- Gynaecological Oncology
- Colposcopy
- LEEP clinic
- Cancer surgery
- Inpatient & outpatient chemotherapy & radiotherapy
- Tumour Board
- Uro-gynaecology
  - Urinary incontinence & Pelvic Prolapse Clinic
  - Urodynamic assessment
  - Incontinence & Pelvic Reconstructive Surgery
- Minimally Invasive Surgery
  - Conventional Laparoscopic Surgery
  - Robotic Assisted Surgery
  - Transcervical Resection Procedure
- Reproductive Medicine
  - Intra-uterine insemination, in-vitro fertilization (IVF), intra-cytoplasmic sperm injection (ICSI), donor programs for oocyte, embryos and sperm

USEFUL TELEPHONE NUMBERS:
- Department Secretaries: 6321 4667 / 4668 / 4673
- Ultrasound Appointment: 6321 4516
- Routine Appointment: 6321 4377
- Fast Track Appointment: 6321 4402
- SGH Main Line: 6222 3322

Raising awareness for OVARIAN CANCER

Ovarian Cancer – What’s New?
Saturday, 01 June 2013
1:00 pm – 4.20 pm
Postgraduate Medical Institute
Singapore General Hospital
Block 6 Level 1, Outram Road
Singapore 169008
www.pgmi.com.sg
Welcome Address

In Singapore, Ovarian Cancer remains the fifth most common cancer in women. More devastatingly, over 75% women with ovarian cancer present at advanced stages. These two pieces of fact motivate us to keep abreast of the developments in the understanding and management of ovarian cancer.

Ovarian cancer diagnosed at an early stage has 80% chance of survival at 5 years. This clearly dictates that we should increase our efforts to detect the disease in its early stages. To achieve this, we need a better understanding of the disease, the symptoms and a high degree of suspicion to look for this deadly disease.

Screening for ovarian cancer remains a challenge, but current research has led us to understand that perhaps more can be done to prevent ovarian cancer.

The Singapore Cancer Society, in conjunction with various hospitals in Singapore, has led the campaign to increase awareness of ovarian cancer amongst health professionals and the public. We have put together a collection of stimulating talks covering topics to improve our understanding of ovarian cancer. We hope you will find this series helpful to your practice.

Dr Chew Ghee Kheng
Organising Chairman
Senior Consultant, Department of O&G
