# SGH CASE 42: 17RE167

- Clinical History:
  - 80+ years old, Female. Cervical lymphadenopathy.
- Specimen:
  - Left cervical lymph node excision biopsy

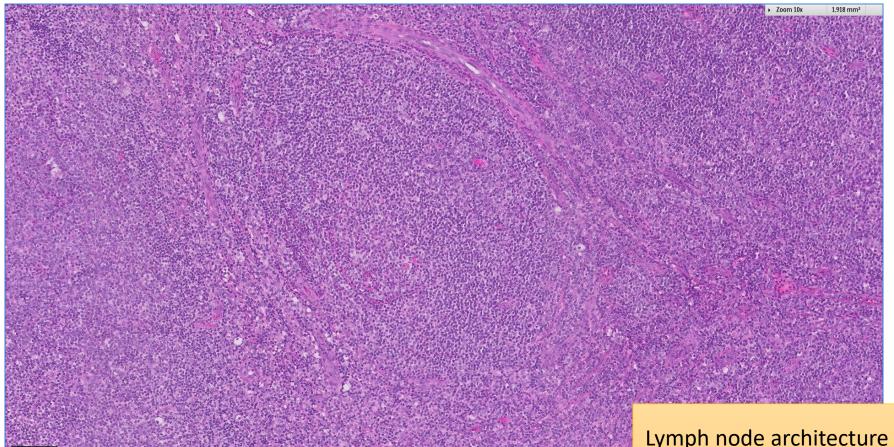

### SGH CASE 42: 17RE167 H&E

SGH haematolymphoid workshop 2017. © All Materials are Copyright of Singapore General Hospital Pathology. No Copy or Reproduction without Permission.

Lymph node architecture distorted by a nodular lymphoproliferation

CD10 highlights follicle centres as well as aberrant interfollicle infiltration by CD10(+) lymphomatous cells

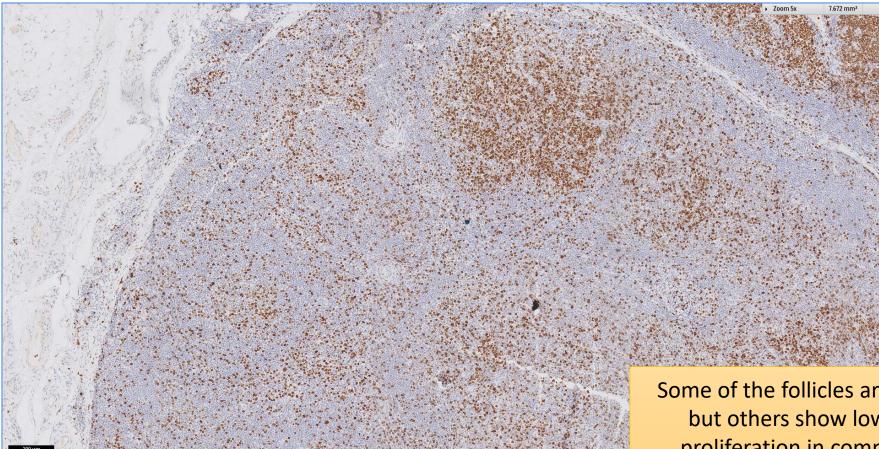

SGH haematolymphoid workshop 2017. © All Materials are Copyright of Singapore General Hospital Pathology. No Copy or Reproduction without Permission.

Some of the follicles are Ki-67 high but others show lower Ki-67 proliferation in comparison to reactive germinal centres

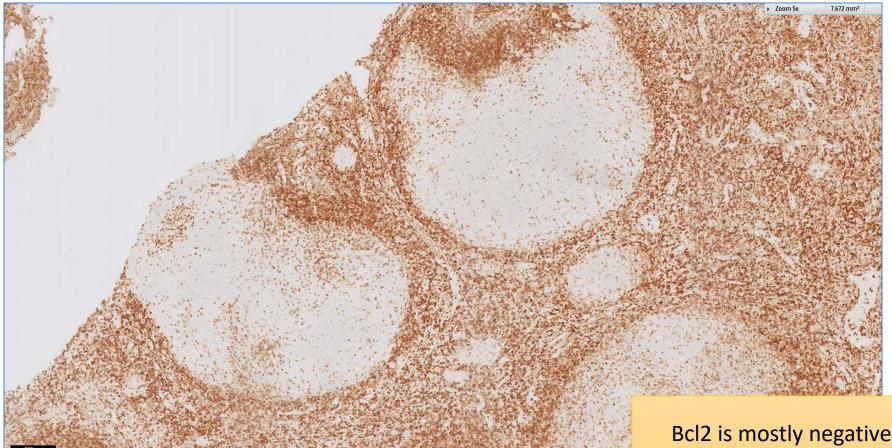

SGH haematolymphoid workshop 2017. © All Materials are Copyright of Singapore General Hospital Pathology. No Copy or Reproduction without Permission.

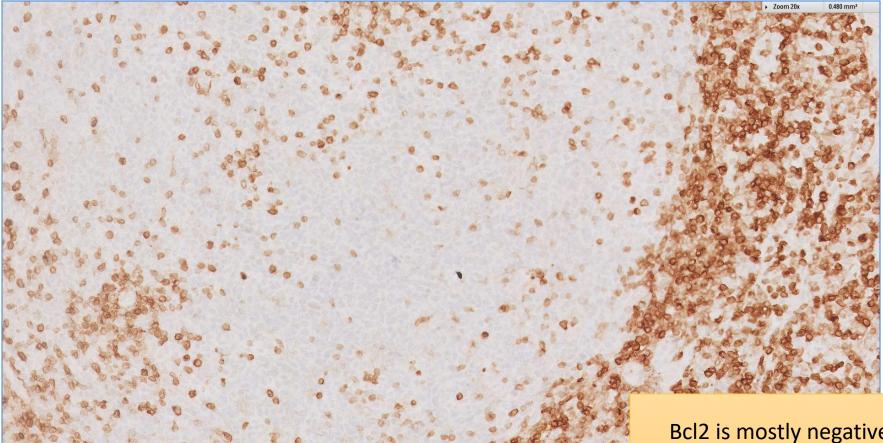

Follicle centre showing lower Ki-67 proliferation in comparison to reactive germinal centres

SGH haematolymphoid workshop 2017. © All Materials are Copyright of Singapore General Hospital Pathology. No Copy or Reproduction without Permission. IgD(+) mantle zones are generally attenuated

SGH haematolymphoid workshop 2017. © All Materials are Copyright of Singapore General Hospital Pathology. No Copy or Reproduction without Permission. Bcl2 is mostly negative in follicle centre cells

SGH haematolymphoid workshop 2017. © All Materials are Copyright of Singapore General Hospital Pathology. No Copy or Reproduction without Permission. Bcl2 is mostly negative in follicle centre cells

# SGH CASE 42: 17RE167

- Diagnosis
  - Follicular lymphoma, WHO Grade 3A, bcl-2 negative
