

Advanced Respiratory Care and Exercise Prescription in Onco-Surgical Population

13 – 19 November 2019

Introduction

Major and complex surgeries are being more routinely performed these days. There is a substantial body of literature examining the pre-operative, acutely postop and subacute care of the surgical patients. The pathophysiology and the clinical predicting model for postoperative pulmonary complications will be reviewed. This course aims to equip physiotherapists with knowledge and skills necessary to manage the complex surgical patients, in particular, the obese, elderly and frail surgical candidate. Subspecialized care for patients who underwent head and neck surgery, lung surgery and solid organ transplant will also be covered. The emerging evidence supporting the roles of physiotherapy in the peri-operative period will be explored.

Course Objectives

At the end of the course, participants should be able to:

- 1) Describe the current state of science and practice in preoperative rehabilitation and prescribe an appropriate prehabilitation exercise program
- 2) Ability to gather, interpret and synthesize information to evaluate the impact of surgery and its associated medical management on the patient's pulmonary function
- 3) Advanced understanding of the pathogenesis, diagnosis and management approach of patients with postoperative pulmonary complications (PPC)
- 4) Advanced skills to assess and provide holistic physiotherapy management for patients undergoing complex surgery such as transplant, head and neck surgery and bariatric surgery

Course Outline

- Preoperative Assessment
- Postoperative Considerations
- Thoracic Surgeries
- Major Abdominal Surgeries and Solid organ Transplant
- Special Surgery – Head & Neck and Bariatric

Target Audience

Physiotherapists with 2 – 3 years of working experience.
